
State 0 → setup (User sets Preliminit, Intentions & Boundaries for the agent
Agent gets intent sets boundaries sets base for context)
State 1 → Monitor [Agent waits for user payments financial events]
State 2 → Ingestion [verify the event]
State 3 → understand [agent interpretes what that event means
Ex:- Restaurant → Dining transaction category]
State 4 → context confidence [Agent measures how much context does it have for this event
[less context]
[Enough context]
State 5 → intervention [Through GNANI]
NO intervention [Proceed without asking]
Event understood
State 6 → Pace Evaluation [comparison of intended V/S actual pace]
Aligned ①
Drift ②
Severe Drift ③

1
2
3
State 7
[what should agent do?]
Silent
waren OR Intervene
State 8
[User resolution]
Nothing happens here
User responds
State 9
[Execute]
Nothing happens here
Execute if an authorized action exists
confirm the action/data was successful
State 10
[verify]
State 11
[learn]
update contextual memory
Back to State 1 [Monitor]
