State 0 — setup → events
→ classification
→ No valid boundary established ⇒ remain in setup

State 1 — monitoring → Transaction / Event does not happen
⇓
wait / Retry data sync
⇓
still persistent gap ? ⇒ Flag data as incomplete

State 2 — Ingestion → failed / Duplicate / Reversed / incomplete transaction
⇓
Retry + Reconcile transaction status
⇓
still uncertain ⇒ Event unresolved
⇓
NO ACTION

State 3 → understanding → Transaction meaning unclear / Payee unknown
⇓
use available context, relationship metadata
⇓
still ambiguous ⇒ move to State 4 with low confidence.

State 4 → context confidence ⇒ Ambiguity detected

Ex:- (i) conflicting/contradicting context
(ii) Multiple matching people
(iii) Multiple possible meanings
(iv) Answer too broad/general
(v) user changes language/subject.

⇓

Generic intervention [Ask the minimum clarification needed]

States

If no issue ⇓ Event understood

If voice failure case happens [Ex:- silence, interruption, Refusal, ambiguous, Not remember etc]

⇓

Retry once

⇓

Still unresolved ⇒ yes ⇒ "unresolved context" (No repeated interruption)

⇓ NO

Later Pace Evaluation

⇓

context/data = incomplete/contradictory

⇓

use only verified transactions

⇓

low confidence impact calculation ⇒ yes

⇓ NO

⇓

clay uncertainty

State 7 Decision

Low confidence + Low impact ⇓ silent

Mild Drift ⇓ warn

Material Drift + valid Authority ⇓ Intervene

Material drift + insufficient context ⇓ Ask again

State 8 User response ⇓

User ignores warning
User intentionally overrides
User changes Spending intention
etc.

No ⇐

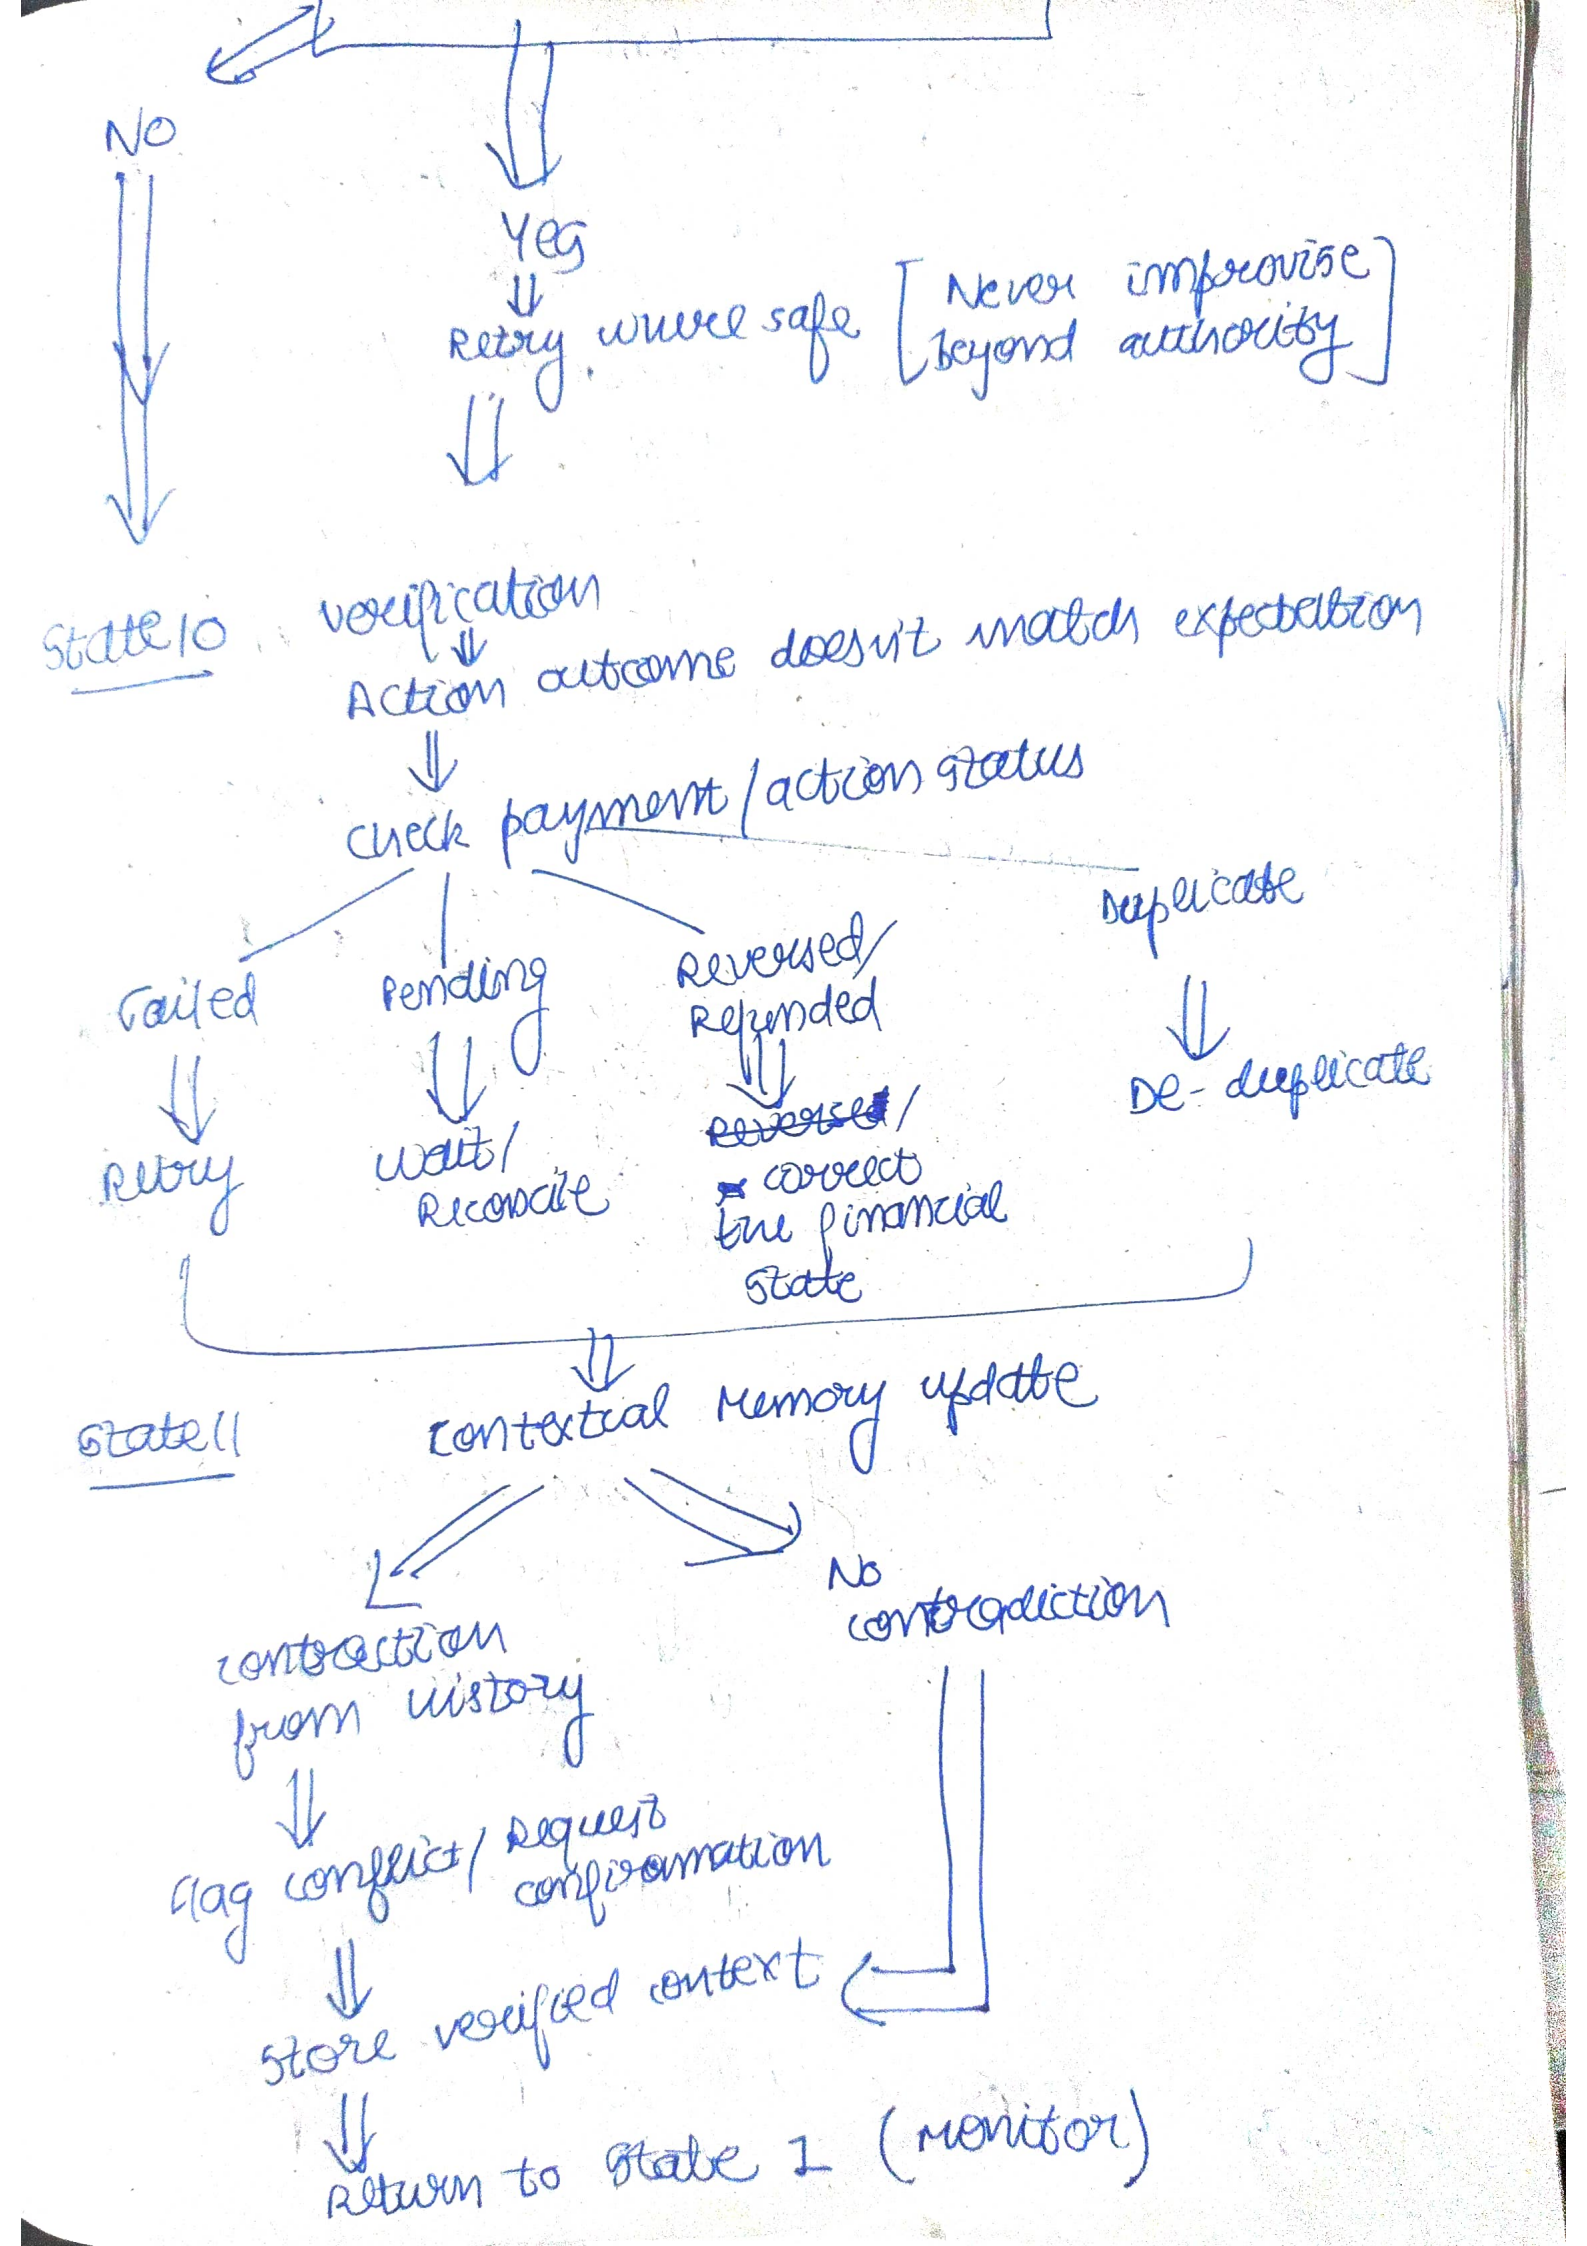

⇓ Yes ⇓ Re-evaluate intent / permissions / context ⇓

outside agent's authority ⇐ No ⇓ Implement

⇓ Yes ⇒ Escalate to exact user decision

State 9 Execution [Authorized action attempt] ⇓

[Payment rejected, Timeout, Auth expired, User request exceeds boundaries etc.]

No
Yes
Retry once safe [Never improvise beyond authority]
State 10
verification
Action outcome doesn't match expectation
check payment / action status
Failed
Pending
Reversed / Refunded
Duplicate
Retry
wait / Reconcile
reversed / correct true financial state
De-duplicate
State 11
Contextual Memory update
contradiction from history
No contradiction
flag conflict / request confirmation
store verified context
Return to State 1 (monitor)
